

Bournemouth, Christchurch, Poole and Dorset Mineral Sites Plan (previously the Bournemouth, Dorset and Poole Mineral Sites Plan)

Sites Proposed for Allocation - Screening for Cumulative Impacts

Introduction and work already undertaken

- 1.1. Following the hearing sessions in September/October 2018 the Mineral Planning Authority (MPA) carried out a screening exercise of the 'Cluster 4' sites (AS19 Woodsford Extension, AS25 Station Road and AS26 Hurst Farm) to consider potential cumulative and in-combination impacts. This comprised the following steps:
- Reviewing cumulative impact assessment work already been done
 - Considering subsequent evidence (including heritage assessment for individual sites) that has been prepared in support of the plan
 - Reviewing the results of the assessment
 - Recording the screening

Screening for Likely Significant Effects

- 1.2. The results of this screening were made available as MSDCC - 82 on the MPA website. It was presented as a matrix, based upon Annex 1 of the SEA Directive which sets out the requirement for Likely Significant Effects. This includes the following:

The information to be provided under Article 5(1), subject to Article 5(2) and (3), (includes) the following:

(f) the likely significant effects¹ on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors;

¹ These effects should include secondary, cumulative, synergistic, short, medium and long-term permanent and temporary, positive and negative effects.

- 1.3. Each matrix set out a list of receptors including those identified in the SEA Directive and each site was assessed against these in relation to:

- Whether or not there is a risk of a likely significant effect
- If so, whether this is direct or secondary
- The scope for cumulative impacts (allowing for other mineral sites or other proposed development in the area)
- Whether any impacts could be synergistic (i.e. greater than the sum of their parts)
- A summary of possible relationships between receptors.

- 1.4. The matrix also considered the potential timescale of impacts and whether or not these could be temporary or permanent.

The baseline for this assessment.

- 1.5. The 'baseline' for this matrix was the existing work presented as part of the submitted plan, principally the latest iterations of: the Sustainability Appraisal (MSPSD-11); the Mineral Sites Plan as annotated with the schedule of proposed modifications (MSPSD - 15) and the Habitats Regulations Assessment (MSPSD-16); and relevant site assessments.

What was recorded for this assessment?

- 1.6. In each box of the matrix the text shown in standard black font was taken directly, or summarised from, the baseline sources.
- 1.7. Where the baseline was considered deficient or not sufficiently transparent, further text was introduced and shown in red italics. This was informed by existing commentary on impacts or considerations recorded in the baseline sources, together with the evidence that has been provided in support of the examination process and the hearing sessions. Where this flagged up potential cumulative or synergistic impacts, this was recorded.
- 1.8. The matrix considered whether or not the screening had identified a need for further modifications to the plan, to be recorded in the comments column. No further modifications over and above those which have already been tabled were considered necessary.

Further work

- 1.9. As noted above, the preliminary screening exercise was only carried out on three of the sites proposed for allocation. The MPA considered it necessary and appropriate to carry out this screening for all the sites proposed for allocation, to identify possible in-combination effects and whether additional modifications were needed for any sites proposed for allocation and to ensure that all sites are screened/assessed on an equal basis. The matrices below have therefore extended the exercise described above to all 19 of the sites proposed for allocation in the Mineral Sites Plan. The baseline is the relevant and updated versions of the information as described above.
- 1.10. In cases where Main Modifications (MMs) to the Plan are proposed in response to a need for amendments or further protection identified through the Screening exercise (for both the original three sites screened, and all the remaining sites subsequently screened), the reference for each MM has been included. The MMs can be seen in the Schedule of Modifications on the Examination website at: <https://www.dorsetcouncil.gov.uk/planning-buildings-land/planning-policy/dorset-county-council/minerals-planning-policy/mineral-sites-plan/examination-library.aspx>
- 1.11. The full range of sites screened is:

Site Reference	Name of Allocated Site	Mineral Type
AS06	Great Plantation	Aggregate - Sand/Sand and Gravel (8)
AS12	Philliol's Farm	
AS13	Roeshot	
AS15	Tatchell's Extension	
AS19	Woodsford Quarry Extension	
AS25	Station Road	
AS26	Hurst Farm	
AS27	Land at Horton Heath	
BC04	Trigon Hill Extension	Ball Clay (1)
PK16	Swanworth Quarry Extension	Crushed rock (1)
RA01	White's Pit	Recycled aggregate (1)
PK02	Blacklands Quarry Extension	Purbeck Stone (5)
PK10	Southard Quarry	
PK17	Home Field	
PK18	Quarry 4 Extension	
PK19	Broadmead	
BS02	Marnhull Extension	Other Building Stone (3)
BS04	Frogden Extension	
BS05	Whithill Extension	
		19 sites screened

- 1.12. This screening exercise, for all the proposed site allocations, is presented as an addendum to the existing SA report, but is a separate document. Following the screening matrix prepared for each site, a summary of the outcomes is provided, identifying possible in-combination effects and inter-relationships among receptors for each site. This summary, for each of the 19 site allocations, in addition to being presented in this screening report

has also been copied into the relevant site assessment in Appendix A of the Sustainability Appraisal Report (May 2019) (MSPSD - 18) and also referenced in Section 8 of the Sustainability Appraisal Report (May 2019) (MSPSD - 18).

1.13. The SA report itself has been updated to include an assessment of main modifications, as has the Habitats Regulations Assessment (HRA).

1.14. In the text below, 'DG' represents Development Guideline and 'DGs' represents Development Guidelines.

1.15. The tables below refer to 'MM' Main Modifications proposed to the Pre-Submission Mineral Sites Plan. These are set out in the Schedule of Main Modifications (MSDCC - 83).

AS06 Great Plantation

Receptor ¹	Is there a risk of likely significant effects (LSE) <u>without</u> mitigation ?				If following mitigation there is still a risk of negative LSE, or of non-significant negative impacts, or of beneficial impacts, what is the timescale?					Comments
	Direct	Secondary	Cumulative	Synergistic	Short-term (<5 yrs)	Medium-Term (5-10 yrs)	Long-term (10+ yrs)	Temporary	Permanent	
AS06 - Great Plantation	<p>Biodiversity (incl. flora and fauna)</p> <p>2. To maintain, conserve and enhance biodiversity</p> <p>Mineral extraction from within the proposed area may lead to effects on European/international designations from proximity and displacement of recreation. There may also be effects on species typical of European sites (including smooth snake, sand lizard, Dartford warbler, nightjar and woodlark), on national designations, local designations and protected species.</p> <p>Without mitigation these impacts would be expected to be significant. Developers will be expected to identify and implement appropriate mitigation to reduce any impacts to a level such that it they are not considered significant.</p> <p>These potential impacts are addressed in the Natural Environment DG for AS06.</p>	<p>The site provides open public access, and the loss of this access land could lead to recreational displacement effects on national and international designations around the site.</p> <p>Without mitigation these impacts would be expected to be significant. Developers will be expected to identify and implement appropriate mitigation to reduce any impacts to a level such that it they are not considered significant.</p> <p>The proposal will require offsite habitat creation and provision of alternative public access land to compensate for loss of</p>	<p><i>Potential for negative impacts on biodiversity through the development of this site and others along Puddletown Road.</i></p> <p>Without mitigation these impacts would be expected to be significant. Developers will be expected to identify and implement appropriate mitigation to reduce any impacts to a level such that it they are not considered significant.</p> <p><i>However, there are opportunities for large scale biodiversity benefits through creation of heathland at this site and other sites along the Puddletown Road, through implementation of the Puddletown</i></p>	<p><i>Potential synergistic beneficial effect from large scale creation of heathland in the Puddletown Road Policy Area. This link is highlighted through a modification to the Restoration Vision for this site (MM39).</i></p>	<p><i>Negative impacts through loss of habitat, however offsite creation of habitat is to be implemented prior to development which will minimise this risk. This is secured through a modification to a DG (MM36).</i></p>	<p><i>Negative impacts through loss of habitat, however offsite creation of habitat is to be implemented prior to development which will minimise this risk. This is secured through a modification to a DG (MM36).</i></p>	<p><i>Creation of additional habitat through ongoing restoration and implementation of the Puddletown Road Policy. This is secured through a modification to the Restoration Vision for this site (MM39).</i></p>	<p><i>Temporary loss of biodiversity, however compensatory measures are proposed. This is secured through modifications to DG (MM36).</i></p>	<p><i>Heathland restoration on AS06 and other existing sites on the Puddletown Road will provide direct and synergistic benefits. This is secured through a modification to the Restoration Vision for this site (MM39).</i></p>	<p>Without mitigation the negative impacts resulting from this development have the potential to be significant.</p> <p>Mitigation will be secured through the requirements of the MSP to ensure that any impacts are reduced to a level such that they are not considered significant.</p> <p>No further modifications proposed for AS06 in addition to those referred to.</p>

¹ Receptors are environmental features (for the purposes of Strategic Environmental Assessment) identified through Plan & Sustainability Appraisal preparation that could potentially be affected by the proposal

Receptor ¹	Is there a risk of likely significant effects (LSE) <u>without</u> mitigation ?				If following mitigation there is still a risk of negative LSE, or of non-significant negative impacts, or of beneficial impacts, what is the timescale?					Comments

This is secured through DG5.</p>	<p>No significant impacts expected. No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.</p> <p>However as restoration proceeds negative impacts will reduce.</p>	<p>Yes – temporary impacts for duration of preparation and working.</p> <p>There is an 'ecological mitigation corridor' averaging some 80m wide running along the southern edge of the proposed extraction area. It provides a physical link and wildlife corridor between the designated SACs to the southwest and east of the proposed site. It also generally follows the conceptual alignment of the Scheduled Monument 'Battery Bank' which may link the two Scheduled Monuments which also lie to the south west and east of the site. The mitigation corridor also serves as a landscape buffer, limiting the visual impacts of development.</p> <p>The reduced scale of the allocation and the proposed mitigation corridor/landscape buffer along the southern boundary are considered to reduce the potential landscape and visual impacts to an acceptable level.</p>	<p>No further modifications proposed in addition to those referred to.</p> <p>Without mitigation the negative impacts resulting from this development have the potential to be significant.</p> <p>Further assessment at the planning application stage will determine impacts and appropriate mitigation to ensure impacts are not significant.</p>	

Receptor ¹	Is there a risk of likely significant effects (LSE) <u>without</u> mitigation ?				If following mitigation there is still a risk of negative LSE, or of non-significant negative impacts, or of beneficial impacts, what is the timescale?					Comments

	Direct	Secondary	Cumulative	Synergistic	Short-term (<5 yrs)	Medium-Term (5-10 yrs)	Long-term (10+ yrs)	Temporary	Permanent	
	<p>Consideration of parcel by parcel extraction would retain the historic network of hedges and provide some limitation to immediate visual impact.</p> <p>The avoidance of tall spoil heaps during the extraction process would reduce these particularly visually intrusive additions to views or the appearance of a scarred landscape.</p> <p>However, given the relatively small size of the Site the degree to which this could be achieved may not be appreciable or render the project unfeasible. Given the historic character of the area and system of boundaries within the Site, and many relating to the 18th and early 19th century development of the farm, it would be desirable to maintain as much of these as possible. It would certainly be necessary to reinstate those which have to be removed after completion of extraction. An approach to reinstatement would need to be considered which would restore as much of the existing landform as possible. This would mitigate the long-term effects on setting, even if the landform is permanently altered and essentially a reconstruction.</p> <p><u>Historic Landscapes</u></p> <p>The site is currently under agriculture, and its restoration to the same use could have a neutral impact</p>

Amenity NB this section relates primarily to visual amenity; noise is considered separately above under Human Health above.	<p>17. To sustain the health and quality of life of the population</p> <p><u>Impact on Sensitive Human Receptors</u></p> <p>Residences adjacent to/within 50m of the site; other residences in vicinity of site.</p> <p>Development would require appropriate mitigation (such as visual and noise attenuation bunding, standoffs) to limit impacts to non-significant levels</p> <p><u>Impact on Existing Settlements</u></p> <p>Nearest settlement is Bere Regis, approximately 2.7 km away. No visual or noise impacts will affect these settlements, but there may be transport related impacts.</p> <p><u>Impact on Recreational Land</u></p> <p>Site is in agricultural use, with no formal/informal recreation on the site.</p> <p><u>Impact on Public Rights of Way</u></p> <p>There are no rights of way across the site, although a bridleway runs adjacent to section of site boundary and will require screening.</p>	<p>The proposed haul road to the public highway will run through land used for recreation, and could have recreational displacement effects which must be addressed and mitigated.</p> <p>There are other Rights of Way in the vicinity that will potentially be affected by quarrying at this site. Potential impacts are addressed through a DG proposed for inclusion through MM-AS12.1</p>	None expected.	None expected.	<p>Yes - any residual effects following mitigation will be greatest during preparation and working.</p> <p>It is expected that impacts will be mitigated to a level considered to be non-significant.</p>	<p>Yes - any residual effects following mitigation will be greatest during preparation and working.</p> <p>It is expected that impacts will be mitigated to a level considered to be non-significant.</p>	<p>Residual effects will decline as restoration progresses, but depending on final restoration landform effects could be long-term.</p> <p>However such effects would have to be less than significant, with mitigation.</p>	Greatest residual effects will be temporary, during preparation and working, declining in restoration phase.	Some effects could be permanent, but must be mitigated to appropriate level, and not be significant.	<p>Impacts will be addressed at the planning application stage as required by planning policy, e.g. Policy DM2 of the Minerals Strategy 2014.</p> <p>No further DGs proposed - necessary safeguards have already been included.</p> <p>Further assessment at the planning application stage will determine impacts and appropriate mitigation to ensure impacts are not significant.</p>

<p>AS12 Philliol's Farm Possible in-combination effects.</p>	<p>There is potential for cumulative or in-combination effects in relation to biodiversity; human health; soil; air/dust; Greenhouse Gases; landscape and archaeology/heritage. Some effects are beneficial. There are potential inter-relationships between biodiversity and human health/amenity while the site is being worked, as additional areas for both need to be provided.</p> <p>In most cases impacts would be expected in the short to medium term. In the longer term, as restoration proceeds, impacts are expected to reduce. The MPA is satisfied that identified impacts can be satisfactorily addressed by DGs and existing/proposed policy. Proposed DG requires cumulative impacts to be taken into consideration.</p> <p>The restoration vision promotes long term benefits, including possible creation of heathland and multi-functional green infrastructure which is identified in the restoration vision, including recreational, landscape, biodiversity and amenity benefits.</p> <p>As this site lies within the boundary of the Puddletown Road Area, Policy MS-7, a long term and coordinated approach to development, restoration and management will be sought within this area.</p> <p>Transport issues, specifically the potential level of minerals traffic on the C7 Wareham to A35 road, generated by AS12 Philliol's Farm; BC04 Trigon Hill Extension and AS15 Tatchell's was identified as a potentially significant cumulative impact. This was addressed through two DGs, MM-AS12.3 and MM-AS12.4. It was considered that these DGs provided adequate protection.</p> <p>However, following the Hearings in Autumn 2018 the MPA was advised by the Inspector to remove AS12 as a proposed site allocation in the Mineral Sites Plan. There was no indication that this was as a response to perceived risks of cumulative impacts.</p> <p>Therefore, a modification (MM41) is proposed to remove Philliol's Farm as a site allocation from the Plan</p>

No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working, and during restoration as the site is restored to ground level.	Timescale for potential for impacts would be expected to be temporary, during preparation and working and restoration - site to be restored to ground level, so any impacts not expected to be permanent.	Mitigation will be secured through the requirements of the MSP to ensure that any impacts are reduced to a level such that they are not considered significant.	<p>Further assessment at the planning application stage will determine impacts and appropriate mitigation to ensure impacts are not significant.</p> <p>No further DGs considered necessary. Plan already contains appropriate safeguards.</p>

Receptors ⁹	Is there a risk of likely significant effects (LSE) <u>without</u> mitigation ?				If following mitigation there is still a risk of negative LSE, or of non-significant negative impacts, or of beneficial impacts, what is the timescale?					Comments
	Direct	Secondary	Cumulative	Synergistic	Short-term (<5 yrs)	Medium-Term (5-10 yrs)	Long-term (10+ yrs)	Temporary	Permanent	
	This is addressed through DG2 Historic/Cultural Environment.									
Cultural heritage - historic buildings	<p>6. To maintain, conserve and enhance the historic environment (including archaeological sites, historic buildings, conservation areas, historic parks and gardens and other locally distinctive features and their settings).</p> <p>This is a quarry set in a quarrying landscape and the nearest listed buildings are too far away to be affected.</p> <p>No significant impact expected.</p>	None expected.	None expected.	None expected.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	None expected.	None expected.	No further DGs proposed - necessary safeguards have already been included.
Landscape	<p>7. To maintain, conserve and enhance the landscape, including townscape, seascape and the coast.</p> <p><u>Landscape Capacity</u></p> <p>The site is located within the Purbeck Plateau, an open coastal landscape that provides sweeping views across a predominantly undeveloped context, often incorporating characteristic geometric fields with stone boundaries.</p> <p>Therefore, despite the upper western area being in the 'Zone of Least Landscape and Visual Impact' it is felt access to this area in terms of the impact on the coombe, the rest of the eastern facing slopes and the Purbeck Way means at this scale it is not appropriate for landscape and visual reasons.</p>	<p>Secondary effects are expected - the proposal would have a significant adverse impact on the physical landscape, which is highly valued and protected.</p> <p>Proximity to the Purbeck Way and public highways are key issues due to visual effects and operational noise. This will result in significant adverse impacts on sensitive visual receptors and impact negatively on the tranquillity in this part of the AONB.</p> <p>MMs 72 and 73 of DG5 'Landscape/Visual'</p>	<p>Potential for cumulative impact issues as existing quarry will remain open while proposed extension is developed.</p> <p>DG (b) (MM71) under 'Other Issues to take into consideration' has been added to address this point.</p>	None expected.	<p>Impacts are expected during site preparation and working.</p> <p>These impacts will be assessed and mitigation identified and applied.</p> <p>However, impacts may continue to be significant even after mitigation, and compensation for such impacts would be required in this case.</p>	<p>Impacts are expected during site preparation and working.</p> <p>These impacts will be assessed and mitigation identified and applied.</p> <p>However, impacts may continue to be significant even after mitigation, and compensation for such impacts would be required in this case.</p>	<p>Impacts are expected during site preparation and working and restoration.</p> <p>In the longer term, impacts will begin to decrease as restoration (of both existing and proposed sites) begins and/or proceeds.</p> <p>These impacts will be assessed and mitigation identified and applied.</p> <p>However, impacts may continue to be significant even after mitigation, and</p>	<p>The site is to be restored to ground level, so no permanent impacts are expected.</p> <p>Policy DM4 of Minerals Strategy 2014 (MSDCC – 54) notes that</p> <p><i>Development which affects the landscape will only be permitted if it can be demonstrated that any adverse impacts can be:</i></p> <p><i>i. avoided; or</i></p> <p><i>ii. where an adverse impact cannot be avoided, the impact will be adequately mitigated;</i></p> <p><i>or iii. where adverse impacts cannot be avoided or adequately mitigated, compensatory environmental enhancements will be made to offset the residual landscape and visual impacts.</i></p>	<p>Further assessment at the planning application stage will determine impacts and appropriate mitigation to ensure impacts are not significant.</p> <p>Impacts will be identified prior to development and as far as possible mitigated. Those that cannot be mitigated will be compensated in a way to be agreed.</p> <p>The issues/impacts are already addressed through DG5 Landscape/Visual in the Plan.</p> <p>No further DGs proposed - appropriate safeguards have already been included.</p>

	necessary compensatory measures are provided.									

PK16 Swanworth Quarry Extension Possible in- combination effects.	<p>There is potential for cumulative effects in relation to biodiversity; human health; water; air/dust; climate/GHGs; cultural heritage (archaeology); landscape and amenity. Impacts are expected to be primarily during preparation/working, i.e. short to medium term; however, some such as landscape will continue until restoration is complete and the site is restored to ground level. This would also affect factors such as amenity of residents and visitors. Noise and visual impacts would also continue during restoration.</p> <p>There is potential for in-combination effects between human health, landscape and amenity, with all being affected during the working of the site. Landscape impacts that cannot be satisfactorily mitigated will require appropriate compensation, as noted in the DGs. Compensation could benefit human health and amenity as well.</p> <p>The DGs require cumulative impacts to be taken into consideration. The MPA is satisfied that identified impacts can be addressed by DGs and existing/proposed policy.</p>

BS04 Frogden Quarry Extension

Receptors ¹⁸	Is there a risk of likely significant effects (LSE) <u>without</u> mitigation ?				If <u>following mitigation</u> there is still a risk of negative LSE, or of non-significant negative impacts, or of beneficial impacts, what is the timescale?					Comments	
	Direct	Secondary	Cumulative	Synergistic	Short-term (<5 yrs)	Medium-Term (5-10 yrs)	Long-term (10+ yrs)	Temporary	Permanent		
BC04 Frogden Quarry Extension	Biodiversity (incl. flora and fauna)	2. To maintain, conserve and enhance biodiversity No impacts on biodiversity are expected.	None expected	None expected	None expected.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	LSE not expected;		No further DGs proposed - necessary safeguards have already been included.
	Human health (incl. noise)	8. To protect and improve air quality and reduce the impacts of noise Impacts on air quality expected to be negligible. No AQMAs will be affected by the working of this site proposal. Any dust resulting from working will be controlled through normal dust-suppression measures 17. To sustain the health and quality of life of the population <u>Sensitive Human Receptors</u> Closest properties are at edge of Sherborne, some 430m to south west; other properties within 500-600m. There is a secondary school at the edge of Sherborne, 430m distant. Further assessment at the planning application stage will determine whether any impacts are likely and appropriate mitigation to ensure impacts are not significant.	Potential for noise and dust impacts beyond boundary of site; these will be minimised through mitigation measures imposed at the planning application stage. Traffic movements generated are low, and proposal will be worked as an extension to the current operation. Further assessment at the planning application stage will determine whether any impacts are likely	Not expected as the site is relatively isolated, with low traffic movements . As the proposal is an extension of an existing site, cumulative impacts are not expected. Traffic generation from these relatively small building stone quarries (including Whithill to the south-west of Sherborne) is not expected to contribute to significant cumulative impacts. Further assessment at the planning	None expected.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	LSE not expected;		No further DGs proposed - necessary safeguards have already been included.

¹⁸ Receptors are environmental features (for the purposes of Strategic Environmental Assessment) identified through Plan & Sustainability Appraisal preparation that could potentially be affected by the proposal

Material Assets	<p>NB - The term 'material assets' for the purposes of this assessment is taken to refer to Natural Assets including minerals and land. Built assets are considered to be covered through other aspects of this assessment.</p> <p>The Sustainability Appraisal includes the following Sustainability Objectives:</p> <p>10. To conserve and safeguard mineral resources.</p> <p>11. To promote the use of alternative materials.</p> <p>12. To provide an adequate and affordable supply of</p>	None expected.	None expected.	None expected.	Benefits of mineral supply while site is working.	Benefits of mineral supply while site is working.	Benefits of mineral supply decrease as site is worked and restored.	Benefits are temporary and will decrease as site is worked and restored.	No further DGs proposed - necessary safeguards have already been included.	

Receptors ¹⁹	Is there a risk of likely significant effects (LSE) <u>without</u> mitigation ?				If <u>following mitigation</u> there is still a risk of negative LSE, or of non-significant negative impacts, or of beneficial impacts, what is the timescale?					Comments
	Direct	Secondary	Cumulative	Synergistic	Short-term (<5 yrs)	Medium-Term (5-10 yrs)	Long-term (10+ yrs)	Temporary	Permanent	
	<p>minerals to meet society's needs.</p> <p>The SA notes that the site would make an important contribution to the supply of building stone but does not promote the use of alternative materials.</p>									
Cultural heritage - archaeology and historic landscapes	<p>6. To maintain, conserve and enhance the historic environment (including archaeological sites, historic buildings, conservation areas, historic parks and gardens and other locally distinctive features and their settings).</p> <p><u>Archaeology</u></p> <p>Human burials were found in the adjacent existing quarry a few years ago. It is expected that an archaeological watching brief for future development of the site would be adequate to mitigate damage to known and potential deposits.</p> <p>Further assessment at the planning application stage will determine whether any impacts are likely and appropriate mitigation to ensure impacts are not significant.</p> <p><u>Historic Landscapes</u></p> <p>The site is on the north-eastern end of Lillington Hill, which is also known at Knighton Hill at the opposite end by Knighton village, on the western side of the Blackmore Vale. Seemingly much of the Vale remained wooded until the Middle Ages, and so the field system</p>	No impacts expected.	No impacts expected.	No impacts expected.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	Mitigation and restoration to be designed to minimise any impacts that may arise to acceptable levels, during and after working.	No further DGs proposed - necessary safeguards have already been included.

	on and around the site may well be Medieval in origin. The Mineral Planning Authority is not aware of anything particularly significant about these fields. Further assessment at the planning application stage will determine whether any impacts are likely and appropriate mitigation to ensure impacts are not significant.									
Cultural heritage - historic buildings	6. To maintain, conserve and enhance the historic environment (including archaeological sites, historic buildings, conservation areas, historic parks and gardens and other locally distinctive features and their settings). Listed buildings are too far away to be affected. No significant impacts on historic buildings expected.	No impacts expected.	No impacts expected.	No impacts expected.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No impacts expected, but if any arose it is expected that they could be permanent, depending on restoration. Mitigation and restoration would be designed to minimise all impacts to acceptable levels, during and after working.		No further DGs proposed - necessary safeguards have already been included.
Landscape	7. To maintain, conserve and enhance the landscape, including townscape, seascape and the coast. The proposed development may be open to expansive views in this rural landscape so mitigation measures will be critical to its integration. Further assessment at the planning application stage will determine whether any impacts are likely and appropriate mitigation to ensure impacts are not significant.	Potential for impacts beyond the site boundary without appropriate mitigation. It is recommended that the scale of development is minimised where possible through measures such as small scale campaigns with progressive restoration. Further assessment at the planning	No impacts expected.	No impacts expected.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	No significant impacts expected. If residual/non-significant negative impacts following mitigation were to occur they would be expected during preparation and working.	Depending on restoration, some elements of the impacts on the landscape could be permanent; however mitigation is expected to satisfactorily mitigate these.		Scale of development should be minimised where possible and extraction take the form of short campaigns and progressive restoration. No further DGs proposed - necessary safeguards have already been included.

		Further assessment at the planning application stage will determine whether any impacts are likely and appropriate mitigation to ensure impacts are not significant.								

BS05 Whithill Possible in-combination effects.	<p>There is potential for cumulative effects in relation to climate. There are also expected secondary effects for human health; water; air (noise/dust); amenity and landscape. No in-combination effects between receptors are expected.</p> <p>Impacts are expected to be primarily during preparation/working, i.e. short to medium term; However the quarries are small, at a traditional scale in the landscape setting. Restoration would maintain open landscape and provide ecological enhancement.</p> <p>The MPA is satisfied that identified impacts can be addressed by DGs and existing/proposed policy.</p>
