Summary

This report contains the results of a consideration of the historical, archaeological, architectural and map evidence relating to the development of Wimborne Minster. It has focused on the understanding of the overall development of the town from its earliest beginnings to the present day. This work has been conducted in order to achieve a better understanding of how the historical dimension has influenced the modern townscape; identify what historical features and structures survive within the modern town and; comprehend the contribution made by this historic dimension to the present character of Wimborne Minster. This will enable an informed approach to the management of change and conservation of the urban environment.

Historical Background

There is no evidence that a town or any large settlement existed at Wimborne Minster during the Roman period. Iron Age and Roman occupation centred at Badbury Rings 5km to the NW. However Wimborne Minster was an important place during the Saxon period, King Ine founded a monastery here by AD705, with his sister Cuthburgh as abbess. The original monastery seems to have been destroyed by Viking raiders during the late 10th century, and was re-founded by King Edward the Confessor as a house of secular canons during the 11th century.

Wimborne Minster is not listed in the Domesday hideage, or as one of the Dorset Boroughs in Domesday. It does however, have a reference to Burgesses and complex tenurial arrangements reminiscent of Borough status. The medieval town appears to have expanded into suburbs in The Leaze and West Borough, although Lay Subsidy returns suggest that it was not particularly wealthy. The town had five churches and chapels at this time; the Minster, St Mary’s, St Peter’s, St Margaret’s and St Catherine’s.

The town expanded economically during the 12th and 13th centuries. The coming of the railway in 1847 led to rapid suburban expansion to the east of the River Allen, although the railway itself closed in 1977.

Town morphology

Wimborne Minster has a complex and varied urban morphology reflecting its complex and prolonged development. The historic town centre is located on a low, flat ridge between the flood plains of the rivers Stour and Allen. The site of the Minster lies just above the floodable land and is surrounded by a complex arrangement of narrow streets. These streets are aligned N-S and E-W and reflect the alignments of the original Saxon planned grid. Medieval suburbs were attached to this Saxon core along four radial streets aligned on the four main compass points. The southern suburb is now only represented by earthworks in the Leaze. The northern suburb, along West Borough comprises a regular arrangement of burgage plots with parallel back lanes on either side of West Borough. West Street may have originally been arranged along similar lines, although the eastern suburb of East Brook seems to have arisen through a less regular amalgamation of historic plots along the Leigh and Poole Roads. Industrial activity tended to be focussed along the river Allen and further south at East Brook. Further significant suburban expansion did not take place until the Victorian era. Wimborne Station was established on the east side of the River Allen accompanied by suburbs of brick built villas and terraces. This area expanded further during the later 20th century, through the construction of modern housing estates.

Built character

Wimborne Minster is notable for the good survival of 16th-18th century buildings. This is particularly noticeable in comparison to its neighbours at Wareham and Blandford where large swathes of the towns were destroyed by fire during the 18th century. Fragments of Saxon masonry survive within the central crossing at the Minster Church of St Cuthburga. The remainder of the church was largely complete in its present form by the 15th century. It is distinctive with its paired towers and use of a mixture of limestone and local heathstone. A large number of late medieval or early post medieval timber framed buildings survive at The Priests House, St Josephs on King Street, almshouses on St Margaret’s Hill and within houses along West Street, High Street and West Borough. Many of the latter were refaced during the 18th century to give the northern part of the town centre a distinctly Georgian feel. There are also good examples of 17th-18th century town houses as well as 17th century farmhouses. The 19th century is best represented by extensive brick built Victorian suburbs at St John’s Hill and Rowland’s Hill as well as large ornamental villas at Colehill.

Landscape Setting

Wimborne Minster lies in an advantageous posi-
tion upon a narrow clay ridge between the flood plains of the Rivers Allen and Stour. It has been suggested that the town grew up close to a pre-existing prehistoric route between Christchurch harbour and Badbury Rings. The ground rises steeply to the north west beyond the historic town centre towards the Kingston Lacy estate. The east side of the river Allen is dominated by the rounded mass of Colehill, here the southern aspect and views over the Stour valley led its being colonised by the independently wealthy and professional classes during the Victorian period. It is now a leafy suburb with a mixture of modern housing estates and Victorian suburban villas.

**Historic Urban Character**

The Historic Urban character of Wimborne Minster is closely bound up with its distinctive landscape setting and the quality of its historic fabric, as well as the quality of its documented history. The late Saxon town plan has been modified over the centuries to leave a tightly packed streetscape furnished with a range of historic buildings spanning the last millennium. This historic core is complemented by medieval suburbs, notably West Borough with its wider more open streetscape lined with Georgian style frontages. The Minster, The Corn Market and The Square are also significant in terms of open spaces within the tightly packed streetscape. The good survival of the historic town structure is complemented by the large quantity of historic buildings. The survival in the historic core of many unbroken groups of 16th-18th century buildings, with little disruption from modern development, is a major factor. Medieval and post medieval bridges set the scene on the town approaches, as well as well preserved 19th century industrial buildings. Victorian suburbs and municipal parks and cemeteries around the fringes of the medieval town, underscore its local setting and emphasises the linkage with the surrounding landscape.

**Further Research**

This report has highlighted many aspects of the historical development of Wimborne Minster and how this has shaped the modern town. It has also indicated gaps in our knowledge and areas which would repay further research. The main areas of suggested further research include:

- Research into the layout of the Saxon and medieval monastic precincts.
- Research into the layout and economy of the Saxon and medieval secular town.
- Research into the sites and origins of the lost medieval chapels of St Mary, St Peter and St Catherine.
Part 1: Introduction
1.1 Background to the Project

The Dorset Historic Towns Survey forms part of a national programme of urban surveys of historic towns, launched by English Heritage in 1992 (English Heritage 1992) and subsequently modified in the light of approaches developed as part of English Heritage’s Historic Landscape Characterisation programme (Thomas 2005).

The 23 places selected for inclusion in the Dorset Historic Towns Survey are shown on Figure 2. For the purposes of this project, Dorset is defined by its post-1974 boundary and includes the present administrative county of Dorset and the area of the Unitary Authorities of Bournemouth and Poole.

1.2 Rationale

Town centres have always been a focus for trade, industry and housing, consequently there have been many different pressures on their development. This has led to both the creation of a potentially rich, complex, deeply-stratified urban archaeological resource through past development of the town and, on the other hand, to serious threats to the survival of this archaeological resource and to other elements of the historical townscape through modern developmental pressure. Without knowledge and understanding of the historic urban environment it is too easy for significant elements to be damaged or removed through modern redevelopment.

The potential for the historic environment to play a complex and highly significant role in economic regeneration was outlined in Power of Place (English Heritage, 2000) and its value is highlighted in the government’s response The Historic Environment: A Force for the Future (DCMS 2001). The potential of the historic environment is particularly significant in towns, where a high quality historic urban environment and the resulting distinctiveness and sense of place that this brings, has been shown to be a primary asset in promoting regeneration. The effect may be direct – through heritage tourism, for example – or more subtle, promoting a strong sense of identity and pride of place, thus creating new confidence and a positive climate for investment and growth.

However, before we can build upon the potential positive effects of the historic urban environment, we must understand it. Characterisation provides a means of understanding the diverse range of factors which create distinctiveness and a sense of place. However, in order to make the characterisation of the historic urban environment relevant and meaningful, it needs to be based on a thorough assessment of the nature, quality and quantity of the historic resource of each urban centre. It is to this end that the Dorset Historic Towns Survey has been undertaken.

1.3 Aims

The aim of the project is to present a review of the existing archaeological, historical and urban morphological evidence and set out the historic character and development of Dorset’s Historic towns:

- to produce a useful and flexible tool to aid in the understanding and management of the town
- to inform archaeological and historic environment research
- to inform the management and interpretation of historic urban buildings and land use.
- to provide an evidence base to feed into the Local Development Framework
- to encourage the integration of urban historic characterisation into the wider process of protecting and enhancing urban character.
- to address a number of research aims set out in the South West Archaeological Research Framework into developing understanding of urban settlement from the Roman to the post-medieval periods (Webster 2008).

1.4 Report Structure

The Historic Urban Characterisation Assessment reports all have a similar structure, divided into seven major sections. These are briefly described below to enable easy navigation to the various elements.

Part 1: Introduction is a general introduction to the Dorset Historic Towns Project and to this report.

Part 2: Overview of Approach is a brief methodological section outlining the guiding principles and approach, together with an explanation of the main technical terms used in this report.

Part 3: Town Context is a consideration of the wider natural setting of the town. It includes a
summary account of the geology and
topography and makes reference to any
Landscape Character Assessments
undertaken in the area. It includes a summary
of the present town, its population, economic
base, etc.

Part 4: Sources is an outline of the main
sources of historic, cartographic,
archaeological and other information used in
the report, together with a summary of previous
research in the town.

Part 5: Historical Analysis provides a
summary account of the chronological
development of the town from its origins to the
present day, and is a synthesis of the available
documentary, archaeological, topographic and
morphological information, based largely on a
review of published sources. This provides the
context for the consideration of Historic Urban
Character.

Part 6: Historic Urban Character Appraisal
presents the details of the historic urban
caracterisation work, identifying the physical
remains of the past in the present day
townscape. It includes a summary of the
overall historic urban character of the town and
a description of the Historic Urban Character
Areas defined as part of this work.

Part 7: Historic Environment Research
Framework outlines the major research

1.5 Who is this Document for?
The information in this report is aimed at the
public bodies, organisations and groups that
play a role in the planning and management of
the urban and historic environments.
Additionally anyone who has an interest in the
historic urban environment, including
community groups, developers, architects and
academics, may find aspects of this work of
interest and relevance.
Part 2: Overview of Approach
2.1 Guiding Principles

Historic Urban Characterisation is a method of defining and mapping the historic dimension of modern townscapes. The approach used by this project has been developed and adapted from Historic Landscape Characterisation studies. The guiding principles of historic urban characterisation are as follows (adapted from Clark et al. 2004, 6):

- Present not past: it is the present-day townscape that is the main object of study.
- Townscape as history not geography: the most important characteristic of the townscape is its time-depth; change and earlier townscapes exist in the present town.
- All aspects of the townscape, no matter how modern, are treated as part of the urban character, not just 'special' areas.
- Characterisation of the urban landscape is a matter of interpretation not record.
- Urban landscape is and always has been dynamic: management of change, not preservation is the aim.
- The process of characterisation should be transparent, with clearly articulated records of data sources and methods used.

2.2 General Approach

In order to characterise the distinctive historic dimension of the present day urban landscape, the systematic identification of the historic attributes of the contemporary townscape is undertaken using a number of cartographic, historic, archaeological and standing building sources. These sources are used to identify ‘Historic Urban Character Types’ which are mapped onto the modern Ordnance Survey MasterMap base. These character types are used to inform the identification of a series of town plan components for the major periods of development for each town from its origins to the present day. The character types are also used to define a series of ‘Historic Urban Character Areas’ within each town. The character areas form the basis of a more detailed assessment of historic urban character.

2.3 Historic Urban Character Types

The identification of the historic urban character is based on the collation and analysis of a large quantity of information, including town plan form, building form, historic map evidence, aerial photographic evidence and archaeological data. This information has been used to define specific areas of single character type within the modern town plan, based on the current settlement character, but taking into account previous uses and settlement history. These Historic Urban Character Types form the basic building blocks for analysing the historic urban character.

The methodology and terminology of these Historic Urban Character Types has been developed from that of Historic Landscape Characterisation and comprise a series of ten Broad Types each sub-divided into a number of more specific Historic Urban Character Types. The list and description of the character types is set out in Appendix 4. The Historic Urban Character Types used are a standardised classification across all the Dorset Historic Towns. This enables direct comparisons to be made between towns across the county and allows consistency in analysis of the historic environment of the different towns.

The Historic Urban Character Types are mapped onto the digital map base using a Geographical Information System (GIS), linked to a table containing data on the settlement attributes of the current Historic Urban Character Type, the period from which it derives, and data on all previous Historic Urban Character Types. This enables the character of the town to be displayed for all periods and allows a comprehensive picture of the development of the town through time and the time depth of the current urban character to be presented.

2.4 Town Plan Components

Town Plan Components are a series of recognisable morphological units with a definable time depth within an individual townscape. These plan components have been identified through the analysis of the town plan and building fabric, together with their historic urban character types, to form a series of larger units (on a street or block scale rather than on a plot scale) that illustrate the composition of the town within a specific chronological period. These town plan components have been used to identify and illustrate the historic development of each town, as set out in Part 5 of this report. A series of twenty seven standard types of town plan component have been identified.
2.5 Historic Urban Character Areas

The historic urban characterisation of the Dorset towns produces a large quantity of detailed data recorded within individual Historic Urban Character Types. This information is at a too fine-grained scale to enable easy understanding of the character of the town. Therefore, the information has been used to define a smaller number of larger areas of distinctive character within the town known as Historic Urban Character Areas. These can be used as a means of understanding the past and the present character of the town, simplifying the large quantity of data presented by the Historic Urban Character Types and enabling a more detailed appraisal of the historic urban character to be undertaken.

The Historic Urban Character Areas are recognisable distinctive areas which have meaningful coherence within the modern townscape. They are defined by one or more of the following attributes:

- consistent historic urban character
- common historical development
- similar topographic location
- similar degree of archaeological and/or historic building preservation.

Each character area will have its own individual ‘biography’ that has defined its present character. Consequently, the Historic Urban Character Areas can be used as a tool to help maintain and reinforce the historic character and individuality of these areas and the town as a whole.

2.6 Extent of the Study Area

The Dorset Historic Towns Project Study Area for Wimborne Minster is taken as the present-day urban extent as shown on the 2009 Ordnance Survey MasterMap digital mapping and comprises only part of Wimborne Minster parish but also includes a small part of Colehill and Pamphill parishes. The urban extent includes areas of recreational open space, school playing fields, etc. around the fringes of the settlement. Where practicable, the boundary to the Study Area is along boundary lines marked on the MasterMap base.

2.7 Definition of Terms

2.7.1 Characterisation Terms

Historic Urban Character Area
See section 2.5 above.

Historic Urban Character Type
See section 2.3 above.

Sensitivity to Large Scale Development
The assessment of sensitivity to large scale development has been developed from that included in the landscape character assessment undertaken by West Dorset District Council (WDDC 2008). Large scale development is taken to mean any form of development that is on a scale much larger than the existing plot pattern and building size.

Strength of Historic Character
The strength of character in each area is determined by judging the survival of historic urban elements in the modern townscape, together with its distinctiveness and recognisability. The strength of character is assessed as Strong, Medium or Weak.

Strong character is where there is widespread survival of historic boundaries and buildings reflecting considerable time depth, where modern development remains unobtrusive.

Medium character is where there is survival of historic boundaries and buildings, but modern development is more evident.

Weak character is where there may be some historic elements present, but there is little time depth evident in the visible structures, which comprise mainly modern buildings and street and boundary layouts.

Town Plan Component
See section 2.4 above.

Urban Structure
This is the framework of routes, plots and spaces and the way they relate to one another, which forms the basic plan on which all other aspects of the built environment and historic development and use are based.

Housing Density
Low Density = < 30 dwellings per hectare (dph)
Medium Density = 30-50 dph
High Density = >50 dph

2.7.2 Archaeological Terms

Archaeological Intervention
A general term for any type of formal archaeological recording.

Archaeological Potential
Archaeological potential is an assessment of the probability of discovering archaeological finds and features, the likely amount and complexity of the archaeology, and the level of survival. See Appendix 5 for more detail.
Building Recording
Building recording refers to any survey and recording of the structure of a building.

Evaluation
An archaeological evaluation is a limited programme of fieldwork to determine the presence or absence of archaeological deposits or remains within a specified area or site. It can include trial trenching, test pitting, geophysical survey, etc.

Excavation
An archaeological excavation is a programme of controlled fieldwork exposing, investigating and recording an area of below-ground archaeology.

Watching Brief
A watching brief is a formal programme of observation and investigation conducted during any operation carried out for non-archaeological reasons.

2.7.3 Historical Terms

Hundred
A hundred was an administrative subdivision of a shire based notionally on a grouping of 100 hides. They originated in the Saxon period and had their own courts and jurisdiction usually held at a meeting place close to the geographical centre of the administrative area, or at a point easily accessible from any part of the hundred.

Hide
A hide was an area of land defined for tax assessment purposes and was based on the amount of land required to support a family. The size of land unit covered by a hide varied according to its productivity but is generally thought to equal approximately 120 acres. Hides originated in the Saxon period but may be based on earlier land units.

Tithing
A tithing was a small administrative subdivision of a hundred notionally containing ten land owning families.

Manor
A manor was a parcel of land, often assessed at 5 hides, over which a lord held domain and could exercise certain rights and privileges, such as the right to have the populace of the manor work the Lord’s lands. The lord of manor could be a secular noble, the church, or the King himself; more important nobles held several manors. The manorial system was established in the late Saxon period, around the 10th century AD and became increasingly feudal following the Norman Conquest.

Borough
A borough was a town or part of a town upon which a degree of self governance had been conferred through the granting of a charter. Boroughs held their own courts, markets and were often subdivided in to burgage plots held by burgesses (freemen of the borough) for cash rent rather than by feudal service.

Lay Subsidy
The Lay subsidy is a term given to a tax levied on the general populace (as opposed to the clergy or military) and was calculated as a proportion of their moveable wealth. The poor were exempt. The tax was levied occasionally as the king demanded in order to raise money for military campaigns from the late 13th to the 16th century. The lay subsidy rolls are documents recording the names of each person in a village or tithing within a specific hundred and the amount of tax payable by them. The rolls are particularly useful in the context of the Historic Towns Project because during the 13th and 14th centuries, surnames tended to reflect either occupation or place of habitation. The documents thus provide information on the size of the taxable population within a town, the range of crafts within a particular town or tithing, the names of the individual tithings and boroughs within a hundred and the names of other dispersed settlements within them.

Hearth Tax Returns
The Hearth Tax was a tax introduced in 1662 and abolished in 1689. It was payable by householders on the number of hearths or fireplaces within a household. The tax amounted to 1 shilling per hearth or stove payable twice a year. The Hearth Tax Returns generally date from 1662-6 and 1669-74; periods when the tax was administered by royal bailiffs rather than private firms. They include a list of householders eligible for the tax per parish and the number of hearths in each household. The documents are used in this report to give an estimate of the population of the town during the late 17th century.
