William Beardsworth
[redacted]

I would like to ask the independent examiner to amend the BANP please.

Firstly, the Movement and Access proposals in the BANP project 04 were developed several years ago and should be reviewed before being implemented to ensure they still reflect current needs and will work well with current circumstances. The BANP should state that new evidence should be considered (current traffic movements and volume, predicted traffic volume, how well traffic routes used instead of South Street would work, whether other areas of the town would be badly affected by more traffic (noise and fumes) due to the loss of access to South Street, how businesses would be affected by less parking in South Street), and the BANP should also say that after being given the new evidence, stakeholders will be asked to confirm the current design proposals or help redesign them.

Secondly, Policy COB2, Rope Walks car park is an important Bridport site. It plays a big role in the local economy and accessibility. As a 92 year old it is the best car park to be driven to, because its position enables me to independently access shops in any part of the town and comfortably walk back to it. It is important that the BANP demands full community engagement before any redevelopment proposals are made for that site because it is very well used by many people for many different reasons and plays an important role in ensuring the town thrives.

Please could you let me know that you received this email.

Many thanks,

William Beardsworth
