
Mampitts Lane Shaftesbury – Bus Gate Technical Note

Ref: SM/RC/ITB19251-001c TN
Date: 5 March 2024

SECTION 1 Introduction

1.1.1 Shaftesbury Town Council has appointed i-Transport to provide highways and transport advice in relation to the implementation of a bus gate on Mampitts Lane, Shaftesbury. The bus gate was a conditional requirement of the outline consent for the site at Land to the East of Shaftesbury, comprising some 817 new homes.

1.1.2 The bus gate is to be located on Mampitts Lane immediately to the east of the junction with Pound Lane and would be enforced by appropriate signage linked to a Traffic Regulation Order (TRO). The purpose of the bus gate would be to prevent the following traffic movements:

- Development traffic accessing the A350 Christy's Lane via Pound Lane;
- Strategic traffic routeing between A350 Christy's Lane and Salisbury Road - via Pound Lane, Mampitts Lane and Allen Road; and
- Encourage local journeys to be made by non-car modes towards central Shaftesbury.

1.1.3 Shaftesbury Town Council have requested a review to be undertaken to consider various potential options to remove or relocate the bus gate from its secured location on Mampitts Lane. To undertake the review the following tasks have been undertaken;

- A review of vehicle volumes and speeds currently using Pound Lane, Mampitts Lane and Allen Road;
- An assessment of vehicle journey times across the local highway network, and
- Consideration of forecast vehicle trip movements from local residential areas in proximity to the proposed bus gate.

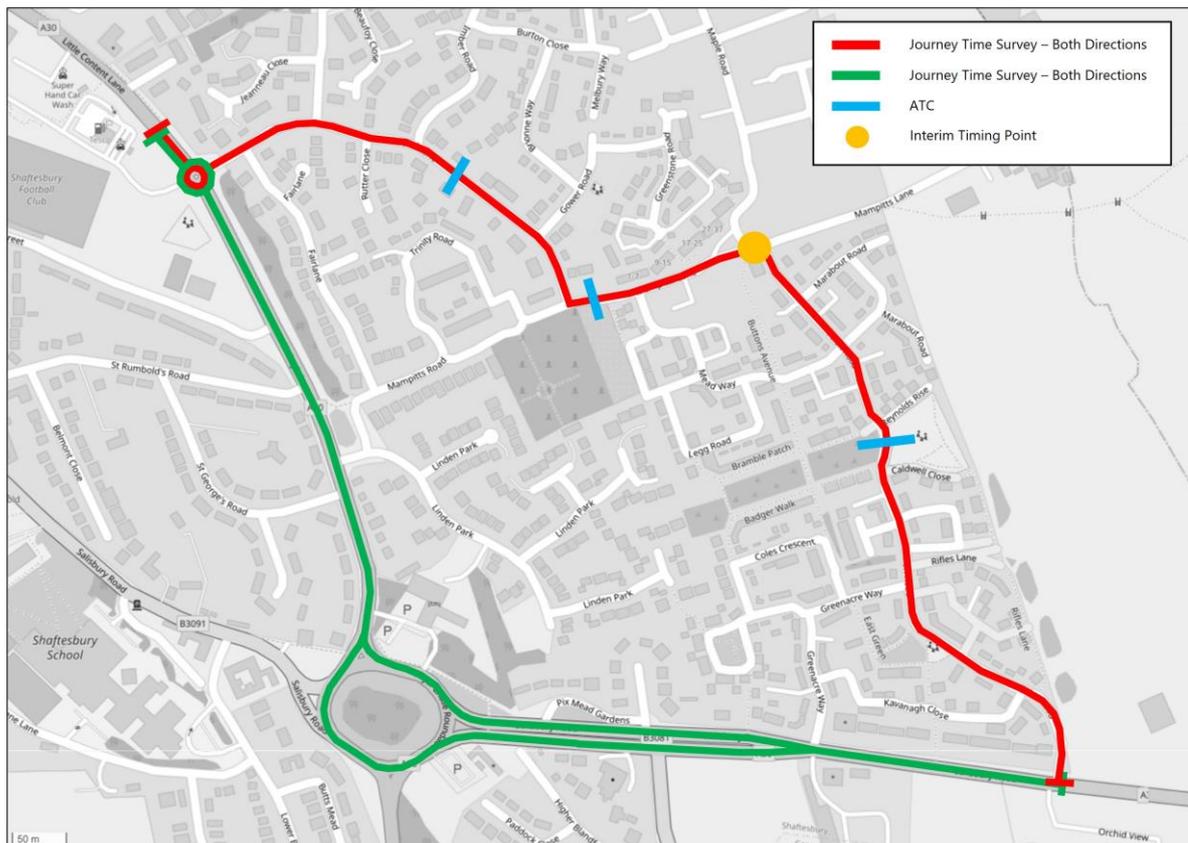

1.1.4 This technical note sets out the findings of the review and puts forward a recommendation.

SECTION 2 Local Traffic Conditions

2.1.1 This section details the traffic surveys undertaken to establish the existing volume and speed of traffic currently using Pound Lane, Mampitts Lane and Allen Road. This provides the necessary evidence base to consider the impact of implementing a bus gate on Mampitts Lane or in the near vicinity. It should be noted that the survey locations and dates were agreed with Dorset Council.

2.1.2 A plan presenting the location and type of traffic surveys is presented in **Image 2.1** below.

Image 2.1: Traffic Survey Scope

2.2 Existing Vehicle Flows and Speeds

2.2.1 Automatic Traffic Count (ATC) surveys were undertaken for a period of seven days, from 06/10/2023 to 12/10/2023 at the following locations:

- Pound Lane, northwest of the proposed bus gate location;
- Mampitts Lane, at the approximate location of the proposed bus gate; and
- Allen Road, southeast of the proposed bus gate location.

2.2.2 The observed traffic flows identified a morning peak hour between 08:00 and 09:00, and an evening peak hour between 17:00 and 18:00 on the local highway network. These flows are summarised in **Table 2.1** below.

2.2.3 The full ATC results are provided at **Appendix A**, with all calculations presented at **Appendix B**.

Table 2.1: ATC Summary

	Morning Peak (08:00-09:00)*		Evening Peak (17:00-18:00)*	
Pound Lane	Northbound	185	Northbound	110
	Southbound	108	Southbound	175
	Two-Way	294	Two-Way	285
Mampitts Lane	Eastbound	104	Eastbound	185
	Westbound	138	Westbound	130
	Two-Way	242	Two-Way	315
Allen Road	Northbound	62	Northbound	65
	Southbound	80	Southbound	65
	Two-Way	142	Two-Way	129

Source: Survey Data – Appendix A. *Note: Rounding accounts for differences.

2.2.4 The ATC results show that Mampitts Lane (at the location of the proposed bus gate) is currently utilised by between 250 and 315 vehicles during the peak periods. This equates to a vehicle every 15 seconds and represents a significant level of traffic flow.

2.2.5 Comparison of the data also indicates that there are currently a limited volume of vehicle movements from the residential area adjacent Pound Lane, through Mampitts Lane. The data also indicates there are a greater volume of vehicle movements from the residential area north of the Allens Road ATC location, through Mampitts Lane to Pound Lane.

2.2.6 A summary of the observed speeds at each survey location is provided in **Table 2.2**, with the full results contained at **Appendix A**.

Table 2.2: Observed Vehicle Speed Summary

Period	85 th Percentile Speed (mph)			Average Speed (mph)		
	Pound Lane	Mampitts Lane	Allen Road	Pound Lane	Mampitts Lane	Allen Road
07:00-10:00	22.7	17.4	17.1	21.0	16.2	16.0
16:00-19:00	22.5	17.6	17.1	20.6	16.9	16.1
Average	22.6	17.5	17.1	20.8	16.5	16.1

Source: Survey Data – Appendix A.

2.2.7 The above data demonstrates that vehicle speeds within the highway network are relatively low and well within the posted speed limit. Pound Lane shows the highest average vehicle speed of 21 mph and an 85th percentile vehicle speed of circa 22.7 mph. Mampitts Lane and Allen Road see slightly lower speeds, noting the Mampitts Lane ATC was located adjacent the narrow section of the link.

SECTION 3 Highway Network Journey Times

3.1.1 This section outlines the results of vehicle journey time surveys undertaken on key routes within the study area. The specific, surveyed routes which were agreed with Dorset Council are presented in **Image 2.1**, and included the following:

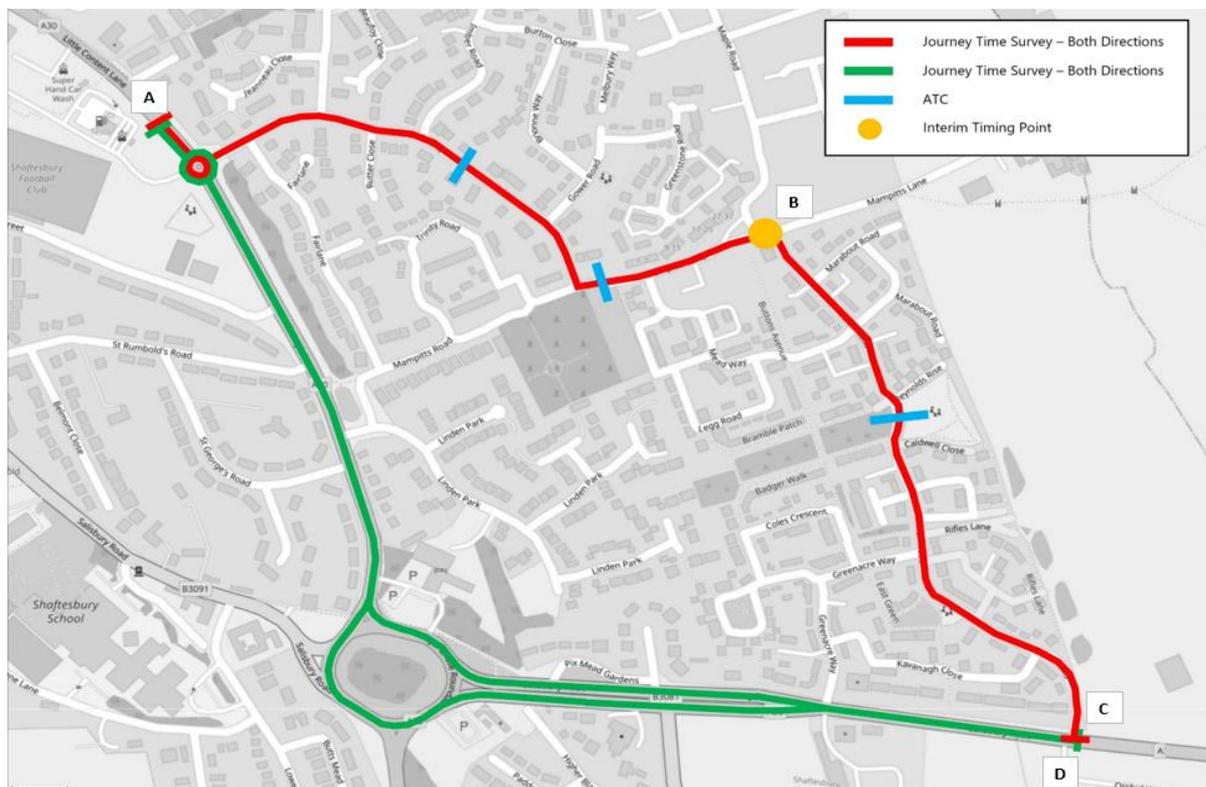

- **Red Route:** Between Pound Lane Roundabout and Allen Road / Salisbury Road Junction – via Allen Road.
- **Green Route:** Between Pound Lane Roundabout and Allen Road / Salisbury Road Junction – via Christy’s Lane (A350).

3.2 Journey Time Survey Results

3.2.1 Journey times along the above routes were obtained using ‘Tom Tom’ GPS data extraction and analysis. The data provided shows the average vehicle journey times in October (excluding half-term, covering 02/10/2023-20/10/2023) along the identified routes on Tuesdays and Thursdays at 15-minute intervals between 07:30 and 09:30, as well as 15:00 and 18:00.

3.2.2 The routes and timing points of the ‘Tom Tom’ survey are shown in **Image 3.1**.

Image 3.1: Tom Tom Survey Scope

Source: i-Transport

3.2.3 'Tom Tom' data used the following timing points to assess average vehicle journey times:

- **A:** Pound Lane Roundabout
- **B:** Mampitts Lane (Interim Timing Point)
- **C and D:** Allen Road / Salisbury Road Junction

3.2.4 A comparative summary of average journey times along the above identified routes is presented in **Table 3.1** below. The 'Tom Tom' data outputs are presented in full in **Appendix A**.

Table 3.1: Tom Tom Journey Time Summary

	Origin	Destination	Route	Average Time (minutes)	AM Peak	PM Peak
Strategic Journeys	A	C	Red	03:29	03:31	03:46
	A	D	Green	02:02	02:11	02:02
	C	A	Red	03:39	03:57	03:48
	D	A	Green	02:40	02:51	02:38
Local Journeys	A	B	Red	01:49	01:50	01:45
	A	B	Green	03:39	04:02	03:42
	B	A	Red	02:02	02:07	02:09
	B	A	Green	04:29	04:31	04:39
	C	B	Red	01:49	01:51	01:40

Source: Tom Tom Data – Appendix A

3.2.5 The above data demonstrates the following impacts on both strategic and local vehicle journey routing:

Strategic Impacts

- On average, Christy’s Lane and Salisbury Road (green route) provides a faster journey time between points A and C/D. The route via Pound Lane, Mampitts Lane and Allen Road (red route) would take 03:29 minutes, and the green route would take 02:02 minutes (01:27 faster). The green route also remains the faster option during the peak hours for those making wider, strategic trips.
- On average, the green route also provides a faster journey time between C/D and A (by 00:59 seconds), and this remains consistent during the peak hours for those making wider, strategic trips.

Local Impacts

- On average, the red route provides a faster vehicle journey time between points B and A, taking approximately 02:02 minutes, compared to 04:29 minutes via the green route. This is similar during the peak hours, where it takes approximately 04:35 minutes to make this vehicle journey via the green route, and 02:08 minutes via the red route.
- If the bus gate was in place on Mampitts Lane, this would equate to an additional journey time between those points of 2 minutes and 27 seconds for each vehicle.
- A similar journey time increase is noted for trips in the opposite direction, between points A and B. It takes approximately 03:39 minutes to make this journey via the green route, and 01:49 minutes via the red route. If the bus gate was in place on Mampitts Lane, this would equate to a vehicle journey time increase of 1 minute and 50 seconds.

3.2.6 To summarise, strategic vehicle trips (i.e. those that do not start or end in the residential area surrounding Mampitts Lane) benefit from faster average journey times via the green route between A and C/D during the peak and off-peak hours, in comparison to routeing via point B along the red route.

3.2.7 For vehicle local journeys (i.e. those made by the residents within vicinity of the proposed bus gate location), vehicles are forecast to experience a maximum average increase in journey time between the timing points of 2 minutes and 27 seconds during the peak and off-peak hours.

3.2.8 The following sections of this technical note aim to set out the quantum of local trips that would be displaced (and consequently experience a longer journey time as noted above) and assess the impact of the bus gate proposal on Mampitts Lane on the surrounding residential area.

SECTION 4 Forecast Vehicle Trips and Assignment

4.1.1 This section presents the forecast impact of implementing a bus gate on Mampitts Lane, based on the potential travel patterns of local residents, by vehicle. The assessment considers the quantum of vehicle trips and the routes choices those trips may take based on established data sources, including Census Data and an interrogation of the TRICS database.

4.2 Parcels of Land

4.2.1 To assess overall impact, the residential area within the vicinity of the proposed bus gate location has been separated into parcels. These are presented in **Images 4.1-4.3** below.

Image 4.1: P1 – Maple Road

Image 4.2: P2 – Allen Road North

Image 4.3: P3 - Allen Road South

4.2.2 Based on a high-level, desk-based assessment, the following quantum of dwellings have been identified for each parcel:

- Parcel 1 – Maple Road: 241 dwellings;
- Parcel 2 – Allen Road North: 171 dwellings; and
- Parcel 3 – Allen Road South: 260 dwellings.

4.2.3 Due to the proximity of each parcel to the relevant junctions assessed within the routeing analysis, it is forecast that residents in Parcel 3 undertake all trips via the Allen Road / Salisbury Lane junction to the south.

4.2.4 Parcels 1 and 2 are considered in greater detail through a review of Census data to establish forecast direction of vehicle trips (distribution and assignment).

4.3 Trip Generation

4.3.1 Trip rates have been derived utilising the TRICS database in order to assess the number of trips undertaken by each of the above parcels. The following parameters are set out below, with the full TRICS output presented in **Appendix C**.

- **Region** – all of England (excluding Greater London);
- **Size Relevance** – developments with a range of 300 to 900 dwellings;
- **Location Relevance** – ‘edge of town’ / ‘neighbourhood centre’ only; and
- **Date Relevance** – surveys undertaken on neutral weekdays only.

4.3.2 **Table 4.1** below presents the trip rates for the residential area within vicinity of the proposed bus gate location.

Table 4.1: Trip Rate Summary

	Arrivals	Departures	Two-Way
AM Peak	0.141	0.4	0.541
PM Peak	0.356	0.147	0.503
24hr	2.164	2.195	4.359

Source: TRICS 7.10.3 (Appendix C)

4.4 Trip Distribution

- 4.4.1 To understand the quantum of vehicle trips that would be impacted by the provision of a bus gate on Mampitts Lane, an assessment of how vehicle trips are likely to distribute from the existing residential area is required. Travel to Work data contained within the 2011 Census has been reviewed to identify the likely destinations and journeys that existing residents undertake.
- 4.4.2 Data for the residents of North Dorset 003 mid-layer super output area (MSOA) have been used. This encompasses Mampitts Lane and the surrounding residential area and is therefore likely to be representative of travel behaviours for the existing local residents.
- 4.4.3 The analysis is summarised in **Table 4.2** and presented in full in **Appendix D**.

Table 4.2: Distribution Destination Summary (By Car)

Location	Percentage of Trips*
Shaftesbury	24%
South	15%
Salisbury	7%
Gillingham	7%
Sturminster Newton	5%
Ludwell	5%
Wider Gillingham	5%
South Somerset	5%
Mere	5%
Other Destinations	13%
Total:	100%

Source: 2011 Census *Note: Rounding accounts for differences.

- 4.4.4 **Table 4.2** demonstrates that the greatest number of trips are associated with Shaftesbury (24%), with smaller quantum associated with destinations to the South (15%), Salisbury (7%) and Gillingham (7%).

4.5 Assignment

- 4.5.1 To determine the routing of traffic generated by the existing residential dwellings surrounding Mampitts Lane, vehicle trips associated with the likely destinations (**Table 4.2**) have been assigned to the road network using the Google Maps 'Directions' Facility (from Mampitts Lane, in roughly the location of the interim timing point shown in **Image 2.1**). Within the Directions facility, a 'starting journey time' of 08:00 during weekday periods has been used to reflect peak traffic conditions.

4.5.2 In some cases where the vehicle assignment identifies multiple routes, vehicle trips have been assigned based upon the journey times identified and judgement, with the quickest and direct route assigned a large number of trips.

4.5.3 The overall traffic assignment of trips generated by the existing residential area surrounding Mampitts Lane is summarised in **Table 4.3**, with the full analysis presented in **Appendix D**.

Table 4.3: Assignment Routeing Summary

Assignment Route Option 1	Proportion of Cars
Allen Road	34%
Pound Lane	66%
Total	100%
Assignment Routeing Option 2	Proportion of Cars*
Christy's Lane (N)	48%
Salisbury Road (W)	23%
Salisbury Road (E)	11%
Christy's Lane (S)	19%
Total	100%
Assignment Routeing Option 3	Proportion of Cars
Christy's Lane (N)	48%
Salisbury Road (W)	17%
Salisbury Road (E)	9%
Higher Blandford Road	11%
Christy's Lane (S)	7%
Lower Blandford Road	8%
Total	100%

Source: Consultants Calculations *Note: Rounding accounts for differences

4.5.4 **Table 4.3** demonstrates that, based on a starting point of Mampitts Lane, 66% of individuals would route via Pound Lane to the west, and 34% would route via Allen Road to the south.

4.5.5 However, from the second and third routeing option points (i.e., the subsequent 'decisions' that vehicle drivers would undertake) indicate that only 48% continue their journey northward. On this basis, vehicle trips from Parcels 1 and 2 are distributed 52% southward and 48% north.

4.6 Trip Displacement – East of the Proposed Bus Gate Location

4.6.1 To determine the number of vehicular trips that would be subject to a longer journey time by the implementation of a bus gate on Mampitts Lane, both the vehicular trip rates and vehicle routeing options have been analysed for each parcel identified in Section 4.2.

4.6.2 Due to the proximity of each parcel to the relevant junctions assessed within the routeing analysis, it is forecast that residents in Parcel 3 make all trips via the Allen Road / Salisbury Lane junction to the south.

4.6.3 For Parcels 1 and 2 however, the quantum of displaced trips is presented in **Table 4.4**. This was calculated using the derived trip rates in Section 4.3, and the routeing proportions set out in Section 4.5 for the observed number of dwellings in each parcel. The full analysis is presented at **Appendix E**.

Table 4.4: Summary of Displaced Trips

	Arrivals	Departures	Two-Way
Parcel 1 – Number of Displaced Trips			
AM Peak	16	46	63
PM peak	41	17	58
24 hour	250	254	504
Parcel 2 – Number of Displaced Trips			
AM Peak	12	33	44
PM peak	29	12	41
24 hour	178	180	358
Total Displaced Trips			
AM Peak	28	79	107
PM peak	70	29	99
24 hour	428	434	862

Source: Consultants Calculations – Appendix E.

4.6.4 **Table 4.4** demonstrates that up to 107 vehicle movements will need to travel further in the morning peak hour, and 99 trips will need to travel further in the evening peak hour if the bus gate is implemented on Mampitts Lane.

4.6.5 This quantum is noted, however the Journey Time Analysis presented in Section 3.2 indicates that the overall impact of this displacement does not impact wider strategic trips.

4.6.6 The impact will be on local trips routeing from B to A (i.e., travelling from Mampitts Lane and attempting to travel north via the Pound Lane Roundabout) during both the peak and off-peak hours. This indicates that approximately 100 trips in the AM and PM peaks will experience a vehicle journey time increase of 2 minutes and 27 seconds in the AM peak if the bus gate is implemented on Mampitts Lane. Across the day the displaced trips equate to approximately 36 vehicles per hour; 18 inbound and 18 outbound.

4.6.7 These vehicles will route via Allen Road, noting that those trips originating in Parcel 2 will already be present along that section of Allen Road. Whilst the vehicle flows will increase, the capacity of the link will not be exceeded and an additional vehicle per minute during the peak period will not have a material impact on highway capacity.

4.7 Trip Displacement – West of the Proposed Bus Gate Location

4.7.1 Consideration has also been given to the trips generated by the existing residential dwellings to the west of the proposed bus gate location. Due to the proximity of these dwellings to the Pound Lane roundabout, it is assumed that all associated traffic will route via this junction and will experience a maximum average journey time increase of 1 minute and 27 seconds when routeing southward from point A (Pound Lane Roundabout) to points C and D (Allen Road / Salisbury Road Junction).

4.7.2 It is noted that from 2011 at minimum, there was no option to route via Mampitts Lane from the Pound Lane roundabout, as presented in the historical satellite imagery shown in **Image 4.4** and **4.5** below.

Image 4.4: Mampitts Lane – 2006 Satellite Imagery

Source: Google Earth Historical Mapping

Image 4.5: Mampitts Lane – 2011 Satellite Imagery

Source: Google Earth Historical Mapping

4.7.3 **Image 4.4** and **4.5** demonstrate that the majority of residential development between the Pound Lane roundabout and the proposed bus gate location could not previously route southward via Mampitts Lane and Allen Road and would have routed via Christy's Lane (A350) and Salisbury Road.

SECTION 5 Summary, Options and Conclusion

- 5.1.1 Without the implementation of a bus gate on Mampitts Lane, it is forecast that a significant proportion of traffic generated by the built-out development will assign via Pound Lane. The resulting vehicle flows will then be greater on Pound Lane than Allen Road.
- 5.1.2 These forecasts are confirmed by the traffic survey data collected recently in advance of the bus gate being implemented. This demonstrates that in the absence of the bus gate on Mampitts Lane, there is a significant assignment of vehicle traffic on Mampitts Lane and Pound Lane.
- 5.1.3 With the bus gate in place, there is forecast to be up to 100 vehicles per hour undertaking journeys from the local area which will need to route a greater distance, with resulting increased journey time of approximately 2 to 3 minutes per vehicle. On an hourly basis this equates to approximately 18 inbound trips and 18 outbound vehicle trips per hour. These vehicles will route via Allen Road, noting that those trips originating in Parcel 2 will already be present along that section of Allen Road. Whilst the vehicle flows will increase, the capacity of Allen Road will not be exceeded and an additional vehicle per minute during the peak period will not have a material impact on highway capacity.
- 5.1.4 Vehicles routeing through Shaftesbury as a part of a longer journey will remain largely unaffected by the implementation of the bus gate.

5.2 Potential Options

- 5.2.1 On the basis of the above review three potential options have been considered;
- 1 Bus gate implemented on Mampitts Lane as originally secured;
 - 2 No bus gate implemented;
 - 3 Bus gates are implemented south of Mampitts Lane (at the northern end of Mead Way and Allen Road).

Bus Gate Implemented on Mampitts Lane

- 5.2.2 A bus gate on Mampitts Lane will ensure vehicles will not assign via Pound Lane, in the absence of an alternative route north to Wincombe Lane. On Pound Lane, the vehicle flows will reduce significantly over the current flows. Increased vehicle journey times for up to 100 vehicles in the AM and PM peaks will be experienced for dwellings accessed off Maple Road (Parcel 1) and the northern section of Allen Road (Parcel 2). On an hourly basis this equates to approximately 18 inbound trips and 18 outbounds trips per hour and is not considered a significant volume, noting that a proportion would likely reassign to non-car modes for local journeys.

No Bus Gate Implemented

- 5.2.3 In the absence of a bus gate on Mampitts Lane, there will remain significant assignment of vehicle trips from the residential areas east of the proposed bus gate location, on Pound Lane, as currently experienced.

Bus Gates Implemented South of Mampitt Lane

- 5.2.4 Implementing bus gates at the northern end of Mead Way and Allen Road would result in only vehicle trips from dwellings in Parcel 1 routeing via Pound Lane and Mampitts Lane. This would reduce the volume of vehicles routeing to/from a destination in the north, assigning to Pound Lane and Mampitts Lane.
- 5.2.5 However, it would also result in all vehicle trips from Parcel 1 routeing to/from destinations in the south having to route via Pound Lane and Mampitts Lane. This would therefore offset any vehicle flow reduction on Pound Lane and ultimately the vehicle flows on these links would remain as those forecast (and currently experienced) in a no bus gate scenario.

5.3 Conclusion

- 5.3.1 Following the review of vehicle volumes and speeds currently using Pound Lane, Mampitts Lane and Allen Road, the assessment of vehicle journey times across the local highway network and consideration of forecast vehicle trip movements from local residential areas in proximity to the proposed bus gate, it is recommended that the bus gate, as proposed in the original plans, continues to be implemented, noting that this will need to be formally consulted upon through the Traffic Regulation Order process.

APPENDIX C. TRICS Outputs

Calculation Reference: AUDIT-236601-231121-1112

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : A - HOUSES PRIVATELY OWNED
TOTAL VEHICLES

Selected regions and areas:

02	SOUTH EAST	
	SC SURREY	1 days
	WS WEST SUSSEX	2 days
04	EAST ANGLIA	
	NF NORFOLK	3 days
05	EAST MIDLANDS	
	DY DERBY	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

i-Transport The Square Basingstoke

Licence No: 236601

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings
Actual Range: 300 to 799 (units:)
Range Selected by User: 300 to 900 (units:)

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: All Surveys Included

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/15 to 20/03/23

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Tuesday 2 days
Wednesday 3 days
Thursday 2 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count 5 days
Directional ATC Count 2 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Edge of Town 6
Neighbourhood Centre (PPS6 Local Centre) 1

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone 5
Village 1
Out of Town 1

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Inclusion of Servicing Vehicles Counts:

Servicing vehicles Included 3 days - Selected
Servicing vehicles Excluded 15 days - Selected

Secondary Filtering selection:

Use Class:

C3 7 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order (England) 2020 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

All Surveys Included

Secondary Filtering selection (Cont.):

Population within 1 mile:

5,001 to 10,000	6 days
10,001 to 15,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	2 days
25,001 to 50,000	2 days
75,001 to 100,000	1 days
125,001 to 250,000	2 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	1 days
1.1 to 1.5	5 days
1.6 to 2.0	1 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	6 days
No	1 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	7 days
-----------------	--------

This data displays the number of selected surveys with PTAL Ratings.

21:00 - 22:00									
22:00 - 23:00									
23:00 - 24:00									
Total Rates:			2.164			2.195			4.359

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: $COUNT/TRP*FACT$. Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. Parameter summary

Trip rate parameter range selected:	300 - 799 (units:)
Survey date range:	01/01/15 - 20/03/23
Number of weekdays (Monday-Friday):	7
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	6
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

APPENDIX D. Census Data Analysis

Routing Option: Taken from Location of Proposed Bus Gate

Destination	Total		Proportion per route	By Route Proportion by car	Route 1	Route 2	Route 3
