APPENDIX B
Glossary

GLOSSARY

Archaeological Interest

An interest in carrying out an expert investigation at some point in the future into the evidence a heritage asset may hold of past human activity. Heritage assets with archaeological interest are the primary source of evidence about the substance and evolution of places, and of the people and cultures that made them. These heritage assets are part of a record of the past that begins with traces of early humans and continues to be created and destroyed.

Architectural and Artistic Interest

These are interests in the design and general aesthetics of a place. They can arise from conscious design or fortuitously from the way the heritage asset has evolved. More specifically, architectural interest is an interest in the art or science of the design, construction, craftsmanship and decoration of buildings and structures of all types. Artistic interest is an interest in other human creative skill, like sculpture.

Conservation

The process of maintaining and managing change to a heritage asset in a way that sustains and where appropriate enhances its significance.

Designated Heritage Asset

A World Heritage Site, Scheduled Monument, Listed Building, Protected Wreck Site, Registered Park and Garden, Registered Battlefield or Conservation Area designated as such under the relevant legislation.

Heritage Asset

A building, monument, site, place, area or landscape identified as having a degree of significance meriting consideration in planning decisions, because of its heritage interest. Heritage assets include designated heritage assets and assets identified by the local planning authority (including local listing). (NPPF Annex 2)

Historic Environment

All aspects of the environment resulting from the interaction between people and places through time, including all surviving physical remains of past human activity, whether visible, buried or submerged, and landscaped planted or managed flora. (NPPF Annex 2)

Historic Environment Record

Information services that seek to provide access to comprehensive and dynamic resources relating to the historic environment of a defined geographic area for public benefit and use. (NPPF Annex 2)

Historic Interest

An interest in past lives and events (including pre-historic). Heritage assets can illustrate or be associated with them. Heritage assets with historic interest not only provide a material record of our nation's history, but can also provide an emotional meaning for communities derived from their collective experience of a place and can symbolise wider values such as faith and cultural identity.

Setting

The surroundings in which a heritage asset is experienced. Its extent is not fixed and may change as the asset and its surroundings evolve. Elements of a setting may make a positive or negative contribution to the significance of an asset, may affect the ability to appreciate that significance or may be neutral. (English Heritage Guidance on the Setting of Heritage Assets)

Significance

The value of a heritage asset to this and future generations because of its archaeological, architectural, artistic or historic interest.

Value

An aspect of worth or importance attached by people to qualities of places. Values may be **aesthetic** (value deriving from the ways in which people draw sensory and intellectual stimulation from a place); **communal** (value deriving from the meanings of a place for the people who relate to it, or for whom it

figures in their collective experience or memory); **evidential** (value deriving from the potential of a place to yield evidence about past human activity); or **historical** (value deriving from the ways in which past people, events and aspects of life can be connected through a place to the present).
